

REU Week 4

Learning Motion Patterns From Optical Flow

Related Work

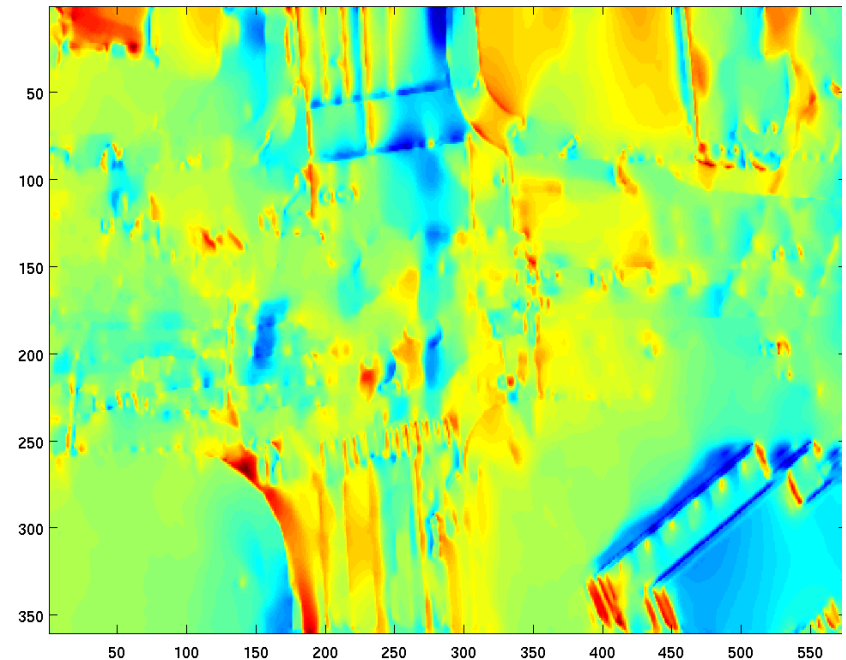

- Imran Saleemi
 - Probabilistic model
 - Uses object tracking
 - $(x, y, x', y', \Delta t)$

(From Imran's paper)

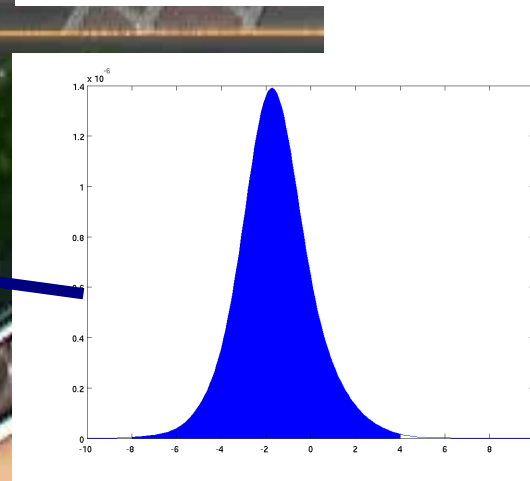

Our Method

- Probabilistic model
 - Using optical flow
 - (x, y, u, v)
- Advantage
 - Avoids object tracking
- Challenge
 - Noise in pixel values

(u values for one pair of frames)

Evaluation

Current Work

- Finding motion patterns
 - Find the peaks in $P(u \mid x,y)$ for every x,y
 - Cluster to find regions of similar motion
- Solving the noise problem
 - Discard areas with no motion
