DeconvNetToolbox Results

Partial positive and negative dataset are used to train a libSVM classifier.

5 points on the example image are evaluated.

DeconvNetToolbox Results

~3 seconds to ~1 second to infer feature maps for the toolbox.

The author claimed that they use GPUs but that speedup isn't enough to make his toolbox practical for detection.

EBLearn

- Code examples in papers are outdated
- Built-in detector framework
- Very flexible configuration of neural networks.
- Little documentation
